Exam Regulations
Data Analytics (Machine Learning)
2021-2022

The exam consists of two tests: **project discussion** and **oral**.

The **oral test** is an **individual test**, while the **project discussion** is carried out by the whole team that worked on the project. However, the evaluation is individual – each component may obtain a different mark.

The two tests can take place in different exam sessions, with two constraints: (1) the **project discussion precedes, or is contextual to, the oral test**, and (2) the oral test is taken before the new edition of the course (in the subsequent academic year).

For example, if the project discussion is taken in some session of 2022, the oral proof must be taken before the course edition of 2023. Otherwise, the project discussion will no longer be valid.

For students who attended the course in previous years, the project to be presented is the one of the last course edition. For such students, the project discussion can be individual.

The project discussion grade is expressed in 25ths and can be increased, by the oral test, up to a maximum of 8 points.
